

Here are few recent sites I've worked on.

<http://www.tectcorp.com/>

For this site, I worked with a team of designers to liberally apply dashes of interactive pizzazz across the site. The site was developed using the smarty framework with Ajax sprinkled throughout.

<http://shstest.com/itrustintrust/>

Being the programmer for this site was interesting. As opposed to developing the entire interface from a Photoshop file, I worked on developing an xml data transmission framework layer to allow the flash interact with the database. Another fun part was deep-linking the flash so users had the ability to bookmark the way they normally would.

<http://www.tenderridge.com/tenderlicious/>

All of the logic for this game was handled at the server. This was the first time I'd really gotten a chance to use some of the nifty new sub-routine features in Php 5. I did the voice talent for this as well ☺ .

http://shstest.com/intrust_arena/

This site is still in beta, but I built this one from scratch. One of the neat features of this site is the little weather bug you see in the top right of most of the pages. It's actually live METAR data from the NOAA. It was fun to try and figure out how to parse through it.

<http://www.shstest.com/hinklax>

This is also still in beta. The current live site is built in a CMS called Joomla. The client expressed they needed a similar site but built from scratch. This site required a ton of data re-entry and organization of that data on the front end.

Here are few of the older sites I've been a part of.

<http://www.catchitkansas.com/> (worked with the stats database)

<http://www.myfirstwin.com/firstcouncil/>

<http://www.ifurn.com/>

<http://ifurnstores.com/>
